ABOUT ME

Enthusiast of the best web & mobile development technologies with over 10 years of experience in the field, a technology and innovation enthusiast, with a solid academic background and rich experience in software development. Currently, I work as a Fullstack Developer, with a focus on Front-End, where I apply knowledge gained throughout my educational and professional journey. Previously, I worked at a digital solutions company, where I was directly involved in projects, providing directives and handling maintenance/refactoring of codes, using Angular with Typescript on the Front-End, Java with Springboot on the Back-End, and PostgreSQL as the database. In addition to my background in managerial processes and an MBA in software engineering, I recently completed my master's in computer science at Harvard University, where I deepened my knowledge in areas such as artificial intelligence, cloud computing, and information security. As a fullstack developer and software engineer, my goal is to continue improving, gaining more experience, and contributing to my team by delivering quality, innovative solutions that add value to clients. Passionate about my work, I always seek to learn more about software development, architecture, creating new products and services with cutting-edge technology, design patterns, distributed solutions, and scalable applications. I believe that continuous learning is the key to success in the technology field, and I am always seeking new challenges and opportunities to enhance my skills and contribute to innovative projects

ACADEMIC EDUCATION

Harvard University	Post Graduate Science Computer
Single College of MG	MBA Software Engineering
Estácio de Sá College	Technologist Management processes
